

**What is claimed is:**

1. A cooler having a plurality of units stackable atop one another, each said unit comprising:

an outer shell having a bottom panel, opposed side panels connected to said bottom panel and opposed end panels connected to said bottom and side panels, one of said side panels defining a drain;

an inner shell having a bottom panel, opposed side panels connected to said bottom panel and opposed end panels connected to said bottom and side panels, one of said side and bottom panels defining a drain opening, said bottom panel of said inner shell being spaced from said bottom panel of said outer shell creating an air space therebetween; and

means for stacking said unit with another unit.

15

2. A cooler, as set forth in claim 1, wherein said means for stacking includes:

a pair of opposed ledges formed in opposed top portions of said inner and outer end panels; and

a pair of opposed legs extending downward from said bottom panel of said outer shell adjacent said opposed end panels of said outer shell.

3. A cooler, as set forth in claim 1, wherein said end panels of said outer shell each have a bottom portion, a middle portion extending from said bottom portion and having a greater width than said bottom portion, and a top portion having an isosceles trapezoid configuration with the base of the trapezoid adjoining said middle portion.

4. A cooler, as set forth in claim 3, wherein said bottom portion has a rectangular configuration.

5. A cooler, as set forth in claim 3, wherein said top portion has an isosceles trapezoid configuration with a long parallel side adjoining said middle portion.

6. A cooler, as set forth in claim 1, wherein said end panels of inner shell each have a bottom portion, a middle portion extending from said bottom portion and having a greater width than said bottom portion, and a top  
5 portion having an isosceles trapezoid configuration with the base of the trapezoid adjoining said middle portion.

7. A cooler, as set forth in claim 6, including a pair of opposed ledges with each ledge located at the junction of said base panel and one of said side panels.

8. A cooler, as set forth in claim 7, wherein top portions of each of said opposed side panels have an elevation less than the elevation of said base of said isosceles trapezoid of said top portion.

5

9. A cooler, as set forth in claim 6, wherein said top portion has an isosceles trapezoid configuration with a long parallel side adjoining said middle portion.

10. A cooler, as set forth in claim 1, including a base member having a sidewall with an internal ledge thereon for receiving said unit.

11. A cooler, as set forth in claim 10, wherein said sidewall has upper and lower portions with said upper portion overhanging said lower portion.

12. A cooler, as set forth in claim 11, including:  
a bottom wall attached to said sidewall; and  
wheel means attached to said bottom wall.

13. A cooler, as set forth in claim 1, including:  
a bottom unit having an inwardly curving sidewall.

14. A cooler, comprising:

a bottom tub having a bottom panel, opposed front and rear tub panels attached to said bottom panel and opposed left and right end panels attached to said bottom panel and to said front and rear tub panels, said left and right end panels extending upward from said bottom panel to an elevation above said front and rear panels, said left and right end panels each having opposed side edges extending upward and outward away from said front and rear tub panels, said left and right end panels extending said tub upward above said front and rear tub panels;

a front connecting panel attached to a front edge of said left end panel and a front edge of said right end panel;

a front bridging panel having end portions attached to said left and right end panels and having side edges attached to said front connecting panel and said front tub panel;

20 a rear connecting panel attached to a rear edge of  
said left end panel and a rear edge of said right end  
panel; and

a rear bridging panel having end portions attached  
to said left and right end panels and having side edges  
attached to said rear connecting panel and said rear tub  
25 panel.

15. A cooler, as set forth in claim 14,  
including;

a top tub having a bottom panel, opposed front and  
rear tub panels attached to said bottom panel and opposed  
5 left and right end panels attached to said bottom panel and  
to said front and rear tub panels, said left and right end  
panels extending upward from said bottom panel to an  
elevation above said front and rear panels, said left and  
right end panels each having opposed side edges extending  
10 upward and outward away from said front and rear tub  
panels, said left and right end panels extending said tub  
upward above said front and rear tub panels;

a front connecting panel attached to a front edge of  
said left and panel and a front edge of said right end  
15 panel;

a front bridging panel having end portions attached  
to said left and right end panels and having side edges  
attached to said front connecting panel and said front tub  
panel;

20 a rear connecting panel attached to a rear edge of  
said left and panel and a rear edge of said right end  
panel;

a rear bridging panel having end portions attached to said left and right end panels and having side edges  
25 attached to said rear connecting panel and said rear tub panel;

a drain positioned to empty said top tub into said bottom tub; and

means for attaching said top tub atop said bottom  
30 tub.

16. A cooler having a plurality of units stacked atop one another, each said unit comprising:

a tub having a bottom panel, opposed front and rear tub panels attached to said bottom panel and opposed left  
5 and right end panels attached to said base panel and to said front and rear tub panels, said left and right end panels extending upward from said bottom panel to an elevation above said front and rear tub panels, said left and right end panels each having opposed side edges  
10 extending upward and outward away from said front and rear tub panels, said left and right end panels extending said tub upward above said front and rear tub panels;

a front connecting panel attached to said front tub panel, a front edge of said left end panel and a front edge  
15 of said right end panel; and

a rear connecting panel attached to said rear tub panel, a rear edge of said left end panel and a rear edge of said right end panel, said front and rear connecting panels extending said tub upward above said front and rear  
20 tub panels.

17. A cooler, as set forth in claim 16, wherein said left and right end panels each have a top edge with openings formed therein.

18. A cooler, as set forth in claim 16, wherein said left and right end panels each have a bottom edge with protrusions formed thereon.

19. A cooler, as set forth in claim 16, including wheel means attached to said bottom panel.

20. A cooler, as set forth in claim 16, including a drain in one of said bottom, front tub, rear tub, left end and right end panels.
